Land And Forest Economics

Land. In economics, the resource that encompasses the natural resources used in production. In classical economics, the three factors of production are land, labour, and capital.Land was considered to be the "original and inexhaustible gift of nature." In modern economics, it is broadly defined to include all that nature provides, including minerals, forest products, and water and land ...

Land | economics | Britannica

A land ethic is a philosophy or theoretical framework about how, ethically, humans should regard the land. The term was coined by Aldo Leopold (1887-1948) in his A Sand County Almanac (1949), a classic text of the environmental movement. There he argues that there is a critical need for a "new ethic", an "ethic dealing with human's relation to land and to the animals and plants which grow ...

Land ethic - Wikipedia

The word forest derives from the Old French forest (also for s), denoting "forest, vast expanse covered by trees"; forest was first introduced into English as the word denoting wild land set aside for hunting without the necessity in definition of having trees on the land. Possibly a borrowing, probably via Frankish or Old High German, of the Medieval Latin foresta, denoting "open wood ...
