NETCONF, YANG, RESTCONF - Cisco

Cisco has gone all-in on model-driven management across all major operating systems. Modern versions of IOS-XE, IOS-XR, and NX-OS all support YANG-powered NETCONF with IOS-XE and NX-OS also supporting RESTCONF and IOS-XR supporting gNMI. Moreover, in addition to pushing configuration changes and pulling config and operational state via model-driven protocols, these same platforms support streaming telemetry based on the same YANG data models.

Cisco has recently introduced NETCONF/YANG support across the enterprise network portfolio. This capability is available in the 16.3 XE code for routers and switches. NETCONF/YANG allows programmatic access to network devices using structured data. Blog Getting Started with NETCONF/YANG – Part 1 covered some of the basics to get started with NETCONF/YANG.

Open vRAN Update: NETCONF/YANG Comes to 5G RAN! One of the key principles of the Open vRAN ecosystem that Cisco and its ecosystem partners announced earlier this year, is to establish open, standard interfaces and management for vRAN. Recently the xRAN Forum has defined the use of IETF's NETCONF/YANG standard for programmatically configuring and managing its lower layer split RAN architecture.

What is the difference between REST and RESTCONF. It tries to follow the RESTCONF Internet Draft [draft-ietf-netconf-restconf] but since it predates the creation of RESTCONF, a number of differences exists. RESTCONF is a HTTP based protocol, very similar to the NSO REST API. The NSO implementation of RESTCONF is based on the Internet-Draft named: draft-ietf-netconf-restconf-17.

A YANG module defines a data model through the data of the router, and the hierarchical organization and constraints on that data. Each module is uniquely identified by a namespace URL. The YANG models describe the configuration and operational data, perform actions, remote procedure calls, and notifications for network devices.

This document provides an architectural framework for datastores as they are used by network management protocols such as NETCONF [RFC6241], RESTCONF [RFC8040] and the YANG [RFC7950] data modeling language. Datastores are a fundamental concept binding network management data models to network management protocols.
